# BS2_GetUserInfosFaceExFromDir

[+2.7.1] Gets the user information corresponding to the user identifier from the data extracted by USB. Supports USB files exported from FaceStaion F2 devices.

## Declaration

```
#include "BS_API.h"

int BS2_GetUserInfosFaceExFromDir(void* context, const char* szDir, char*
uids, uint32_t uidCount, BS2UserFaceExBlob* userBlob);
```

> View the structure of the BS2UserFaceExBlob

## Parameters

- [In] *context* : Context
- [In] *szDir* : Data storage path
- [In] *uids* : List of user identifiers to be imported
- [In] *uidCount* : Number of user identifiers
- [Out] *userBlob* : Pointer to store user information

## Return value

Returns BS_SDK_SUCCESS if performed successfully, or a corresponding error code if an error occurs.
