BioStar 2 user ID can be mapped to several different fields in Active Directory ..... 1

## BioStar 2 user ID can be mapped to several different fields in Active Directory

When user name of AD is set as a fixed value for the User ID it causes difficulties for users to integrate with another third-party system. Up to BioStar 2.7.8, the User ID could not be changed to another field.

**From BioStar 2.7.10, User ID field can be changed/set to map to other values.**

The screenshot shows the 'Field Configuration' window with the 'User Field Mapping' tab selected. It features two columns: 'BioStar2 User Field' and 'AD Server Field'. The 'BioStar2 User Field' column has 'User ID' selected. The 'AD Server Field' column has a dropdown menu open, displaying a list of Active Directory fields. The 'sAMAccountName' field is highlighted in yellow, and a red box is drawn around the list of fields. Below the columns, there is a 'Synchronize' section with a 'Status' indicator showing 'Not yet executed' and a 'Sync Now' button. A 'Cancel' button is located at the bottom right of the window.

BioStar2 User Field	AD Server Field
User ID	sAMAccountName
User Name	accountExpires
	accountNameHistory
	acSPolicyName
	adminCount
	adminDescription
	adminDisplayName
	allowedAttributes
	allowedAttributesEffective
