Release	
Main fixes	

Version 1.4.0 (V1.4.0_181106)

Release

2018-11-29

New Features and Improvements

- 1. Support to the number of users, fingerprints, faces, and cards in Manage Users in Device.
- 2. Change the maximum value of the interval and width for the Wiegand Input.
- 3. Improves the data protection.
- Increase the items to encrypt the data.
- Support to setting the period for storing the personal information.
- 4. Support for Individual Authentication Successful Messages and Working alarm time reports.
- 5. If the data transmission fails when communicating with OSDP, it is transmitted again.
- **6.** The site key is initialized if a secure tamper event occurs.
- 7. If an administrator has registered, modified, or deleted a user, the event log shows whether the editing was done on the server or on the device.
- 8. Support to the creation of up to 2048 Access Levels and Access Groups.
- 9. Support to DESFire/DESFire EV1 Advanced option.
- 10. Support to AES encryption type for DESFire card.
- 11. When using The bypass, The card ID is output as Wiegand even though a user authenticates with the AoC.

Main fixes

- 1. A code is added to prevent the authentication fails because the cache memory is broken.
- 2. The device restarts when a user runs Date & Time menu on the device after setting the time zone on the server.

Bug fixes

- 1. If the user uses the BS GetLogBlob command to get the door ID, the door ID is not output normally.
- 2. Change some special characters (\, /, :, *, ?, ", \, \, <, >, |, .) to be unavailable when setting a user name.
- 3. When restarting the device, if a user authenticates before the device completely restarts, the device is locked.
- 4. Improves I/O module Input and Output process.
- 5. The device cannot read CSN because the card recognized as an NFC tag.
- **6.** Modified the firmware of that slave device so that it cannot be upgraded when a device not supported by the master device is connected as a slave.
- 7. The sound of the arm before it starts works differently than the sound set.
- 8. The relays operate differently from the previous status if the slave device is reconnected.
- 9. The alarm can be released in the Floors status after a fire alarm occurs when the elevator is configured as a Fire Alarm Zone.
