How to add devices

BioStar 2 supports two connection modes shown in the image below. Check the fundamental course contents for more information.

Add devices to the BioStar 2 server

1. Go to **Device** and click **Search Device**.

BioStar	2 💮 Setting () About	(?) Неір			
DASH BOARD	SEARCH DEVICE Advanced search	All Devices			
	All Devices	De De	vice ID	Name	Group
DEVICE	USB Device				
DOOR					
					Not Found

2. Select the devices you want to add to your server.

BioStar 2 has two communication modes, **Device** \rightarrow **Server** and **Server** \rightarrow **Device**.

There's no functional difference between the two. However, **Device** \rightarrow **Server** direction can prevent the device connection from being changed or disconnected from the designated server.

Search	Device						
Found	7 device(s).						Search
	Device ID	Name	Group		Device Type (Master/Slave)	IP Address	Status
~	15	BioEntryW 15 (192.168.16.144)	All Devices	Ŧ	BioEntryW	192.168.16.144	ок
	10006	BioEntryW 10006 (192.168.16.1 🖋	All Devices	Ŧ	BioEntryW M	192.168.16.171	ок
	538102099	BioLiteNet 538102099 (192.168 🖋	All Devices	Ŧ	BioLiteNet M	192.168.16.204	ок

	538101264	BioLiteNet 538101264 (192.168 🖋	All Devices	Ŧ	BioLiteNet	192.168.16.210	ок
	538102578	BioLiteNet 538102578 (192.168 🖋	All Devices	Ŧ	BioLiteNet	192.168.16.200	ок
	546832488	BioStation 2 546832488 (192.16 🖋	All Devices	~	BioStation 2	192.168.16.238	ок

If you want to change the device IP address or their communication modes to **Device** \rightarrow **Server**, click **Set IP** instead of **Add** button.

Found 7	device(s).	Set IP				×	Search
	Device ID						
	15	Device ID	Device Type	Use DHCP		14	ОК
	10006	15	BioEntryW	• IP Address	92.168.16.144	71	ок
	538102099	538101264	BioLiteNet	Subnet Mask 25	55.255.255.0	04	ок
	539308121			• Gateway	92.168.16.1	89	ок
	538101264			Device Port	1211	10	ОК
	538102578			Device Server Con	nection	po	ок
	546832488			Server IP	92.168.16.25	88	ок
				Server Port	1212		
	Set IP						Close

3. Set the server IP address and click **Apply**. Then, the device will automatically try to make a connection.

5

4. With the **Device** \rightarrow **Server** direction, the device will be shown on the **Waiting Device** list. Refresh the browser to check the connection. Once you find the device, you can confirm and add it to the server by right-clicking on the device tree and clicking **Add Waiting Device** button.

Add slave devices connected via RS-485 interface

1. Check the physical device connection and change the device to be the master device in the device setting.

2022/07/22 08:00

	thantiantian	Default			
Aut	thentication				
	Auth Mode	•	Always	£¥ ****	
		- P	Always	29	

- Master Making logical decisions and controlling local zone
- Slave Become a dummy reader to send credential input to the master device
- logical decisions: The master device matches user biometric information and user information received from the slave device, opens the door according to the result, and delivers the result to the slave device. It also controls the Local Zone.

2. Change the device to be **Slave Mode** to be searchable by the master device. Connect to the master device via RS-485 cable, and check the physical wiring connection, and go to BioStar 2 and **DEVICE** tap and right-click on the device tree and then click **Search Slave Device**.

3. Check the search result and click **Add** button.

Up to 31 slave devices can be connected through a daisy chain, and up to 8 fingerprint devices can be connected among the total.

But, if there's a need of making many fingerprint matching with multiple devices at the same time, it's recommended to use the limited number of slave fingerprint devices for the optimal matching performance.
