## How to configure an action for duress authentication event

Applied version: BioStar2 v2.6 or higher version

In BioStar2 v2.6, you can make a trigger and an action for user authentication event.

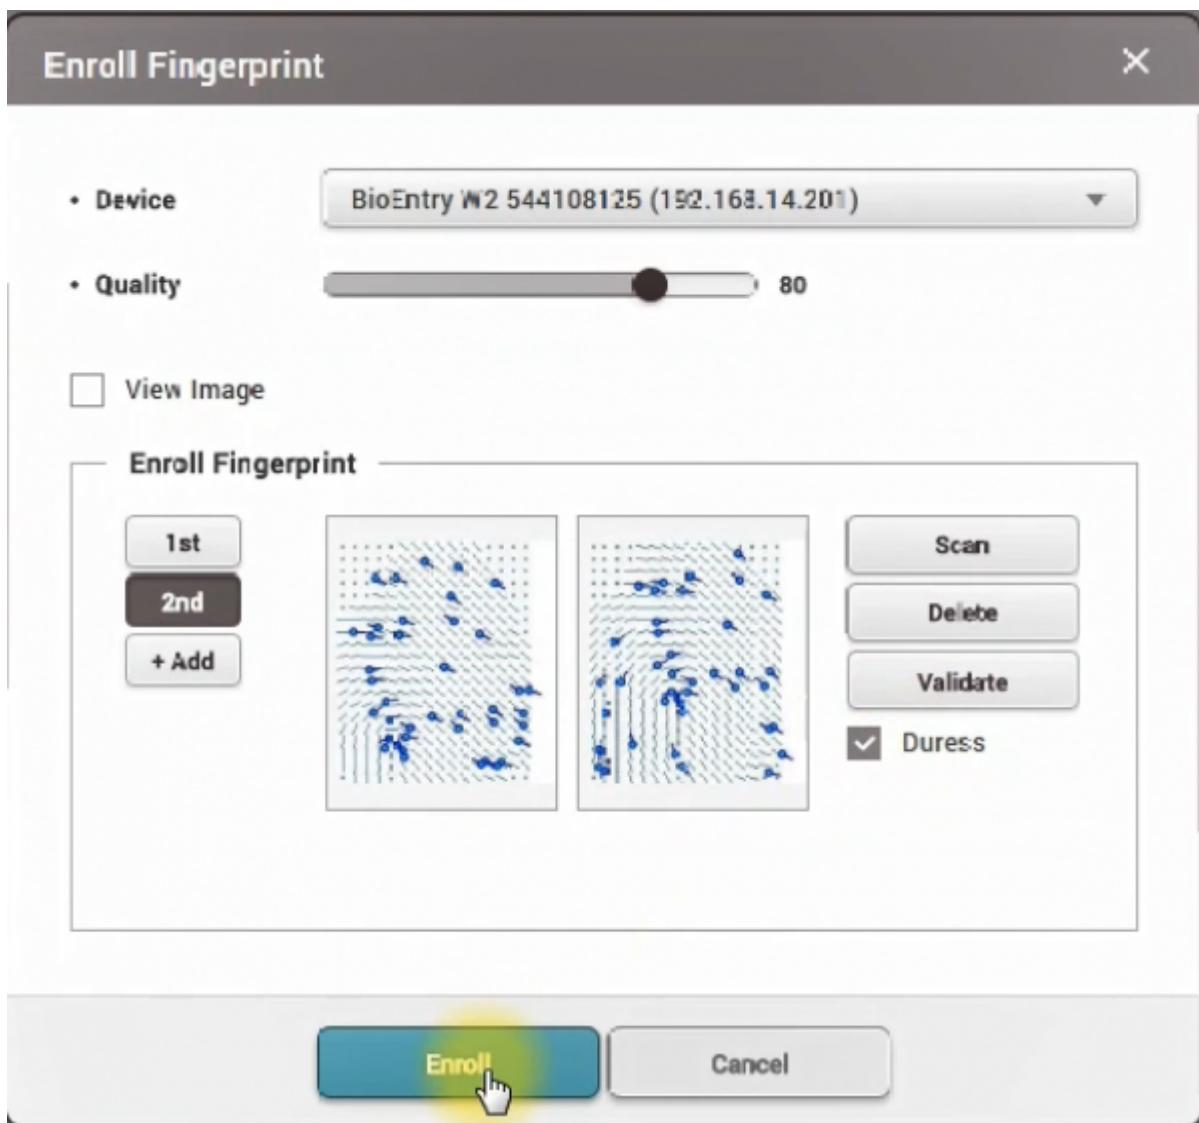

For duress authentication success, you can configure that as follows.

Note: Duress Finger is that a fingerprint chosen to generate a certain event upon fingerprint registration. If a user authenticates himself/herself with such a fingerprint, the authentication gets recorded in a log as duress fingerprint authentication. The system administrator can set a separate alarm using the log.

[duressinput\\_2\\_.mp4](#)

1) Go to User Menu and enroll two finger

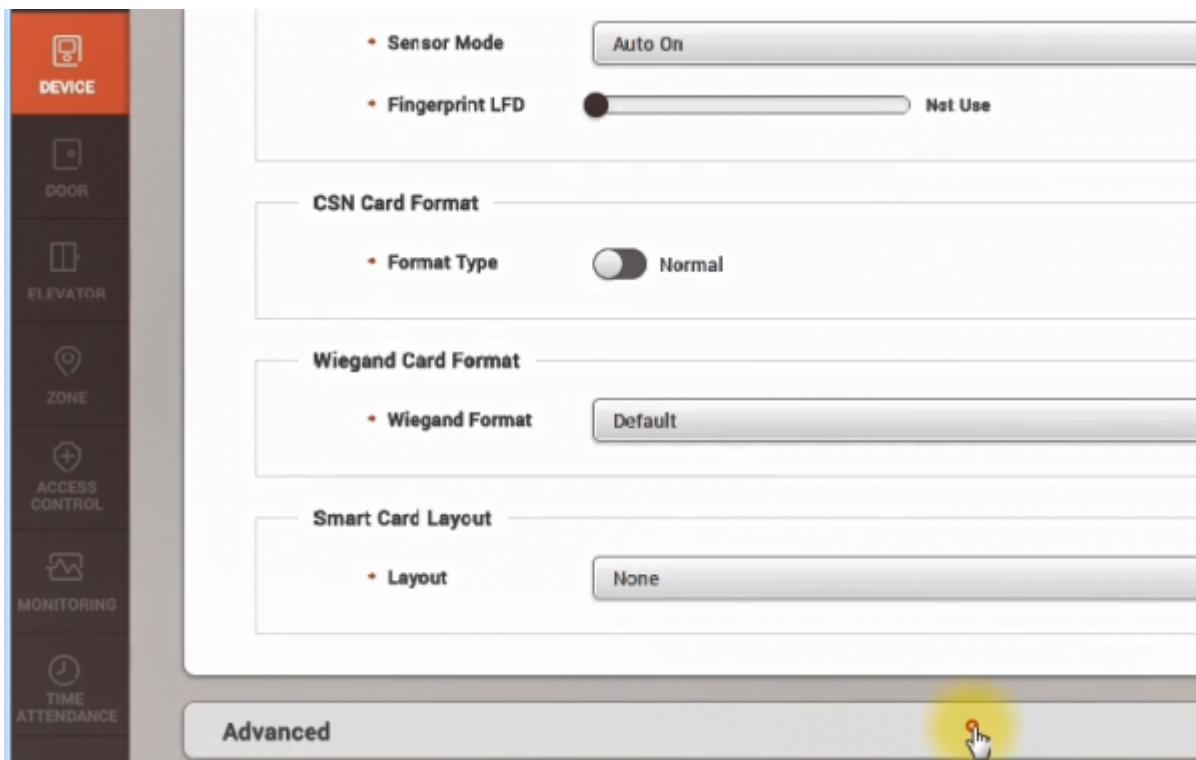

2) Choose [Duress] option for one of the fingers and then, click [Enroll] button

3) Click [Apply] of user information

4) Go to [Device] menu and click one of the connected device

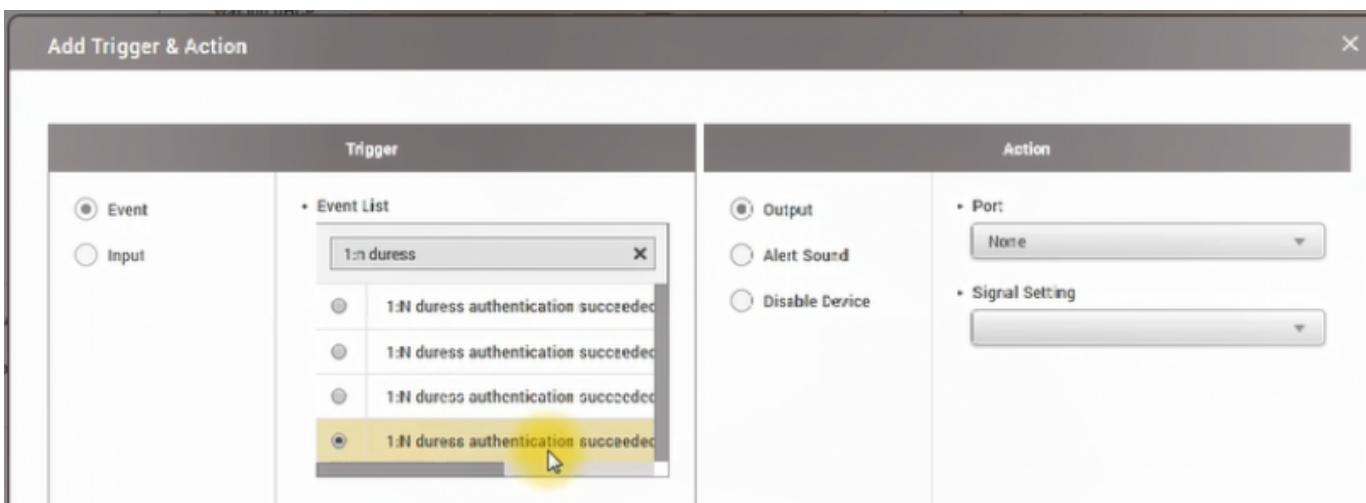

5) Click [Advance]

6) Go to [Trigger&Action] of the device configuration and click [Add]

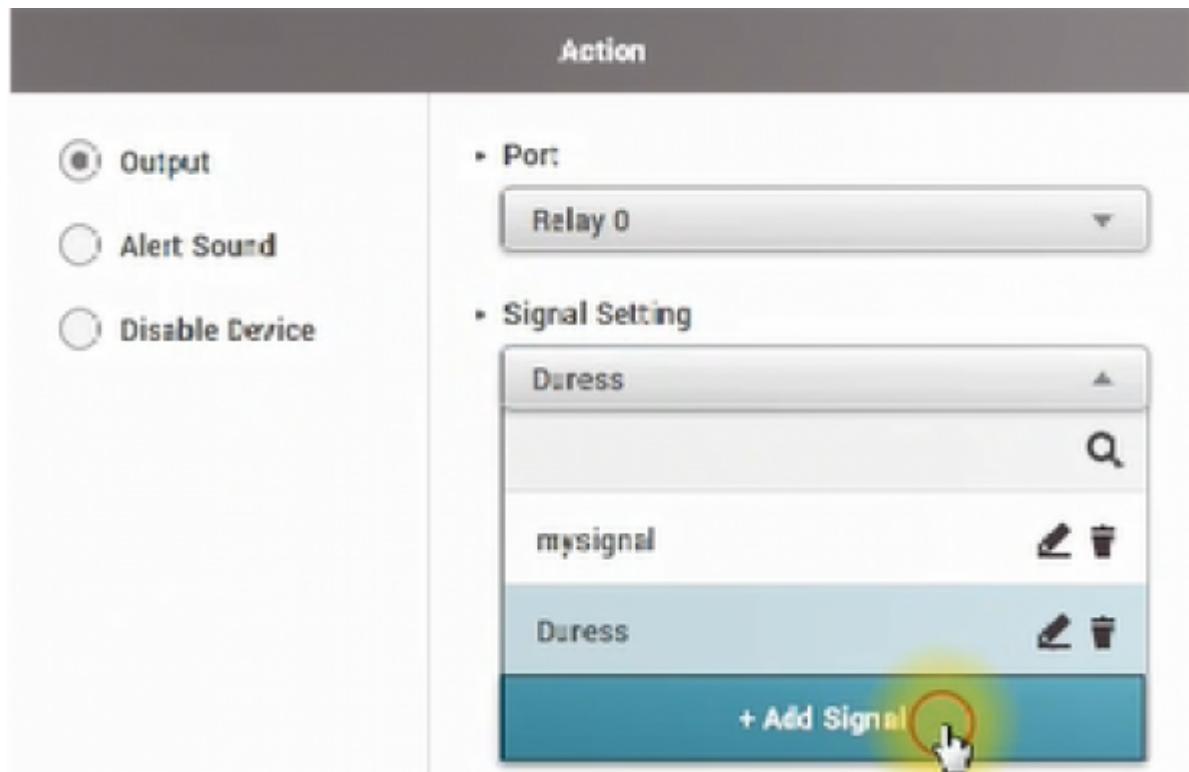

7) Search the event type like [1:N duress] or [1:1 duress] from the event list of Trigger and select it.

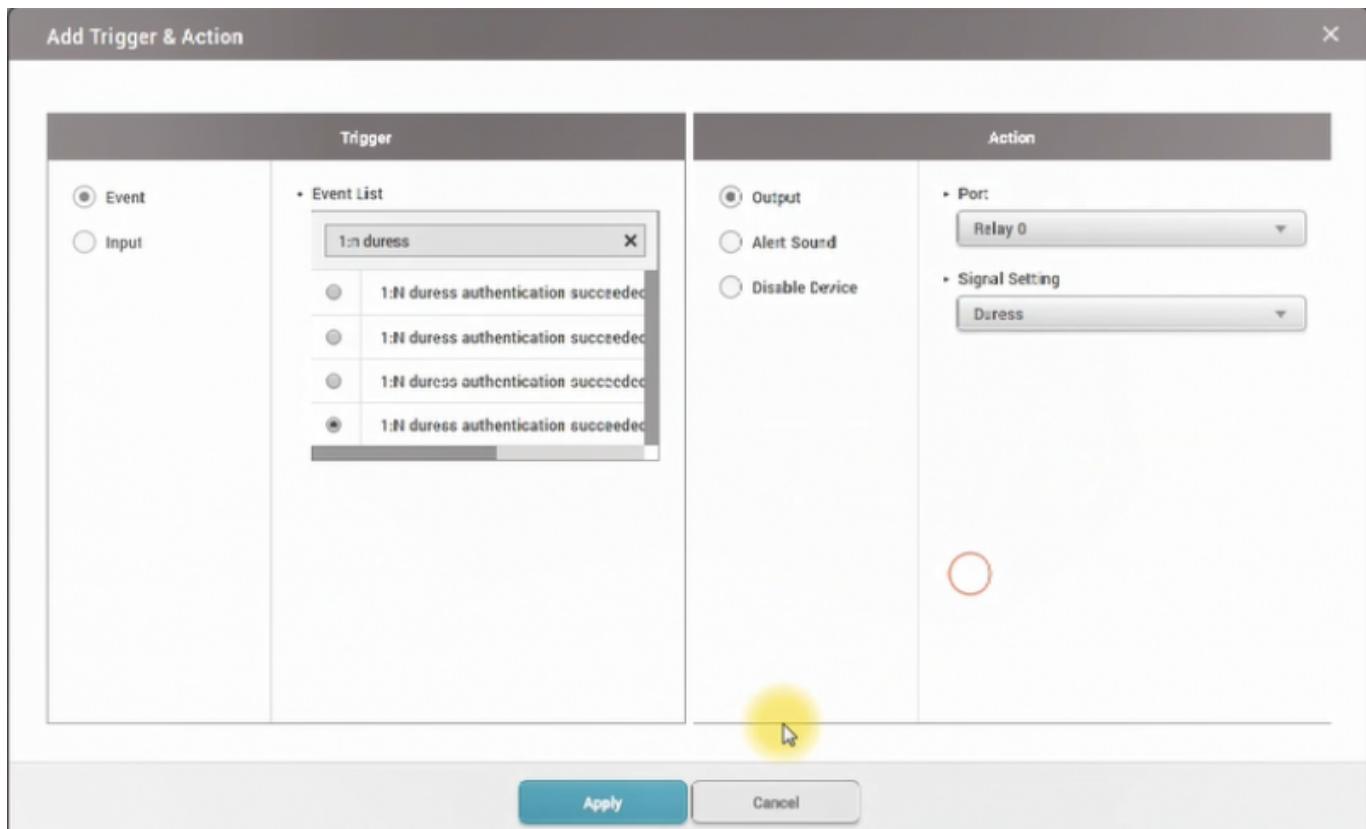

8) Choose output of Action to make output signal from selected port

You can't select used relay port such as a door and another action item.

For signal setting, click [Add signal] and make the configuration

9) Select the signal setting which is predefined and click [Apply]

10) Go to monitoring menu and confirm the log event and action.

The screenshot shows the BioStar 2 software interface. The left sidebar has a 'MONITORING' section highlighted in orange, containing icons for User, Device, Door, Elevator, Zone, Access Control, and Monitoring. The main area is titled 'Real-time Log' and displays a table of events. The columns are Date, Door, Elevator, Device ID, Device, User, Zone, Event, and View. A single row is shown, with the 'Event' column containing the text '1:N duress authentication succeeded (Fingerprint)'. The status bar at the bottom indicates the date and time as 2018/03/18 19:25:31.
