Image Log Storage Path and Auto Saving

From BioStar v2.7.2, you can configure image log storage path and auto saving without viewing or checking logs from monitoring is supported.
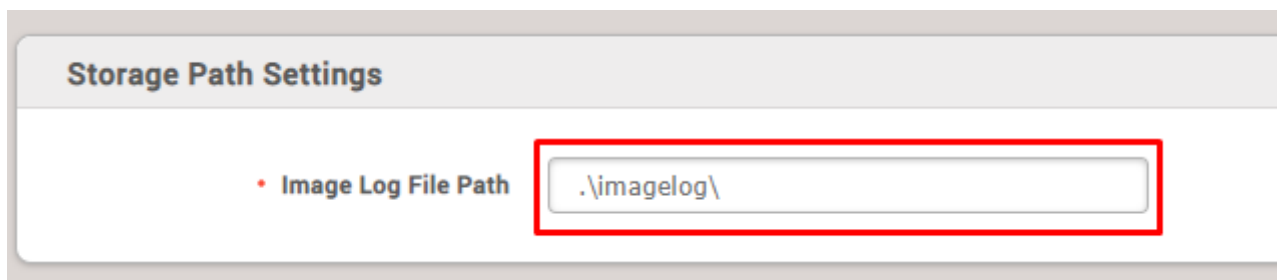

1. Configure image log storage path.

• Log in BioStar 2 server and go to 'Settings - Image Log - Storage Path Settings'.

• Configure the image log file path as below. Default value is '.\imagelog\'.

> • Some of symbols (/, *, ?, ", <, >, |) cannot be supported to set image log file path.

Storage Path Settings

* **Image Log File Path**　　.\imagelog\

2. Enable image log feature from the device.

- Register the device on your device list.
- Go to 'Device - (Selected Device) - Advanced - Image Log' to enable 'Image Log' and click 'Apply' button on the bottom.

Image Log

• Image Log	Enabled

| Event	Schedule	
1:1 authentication succeeded	Always	🗑
1:1 authentication failed	Always	🗑
1:N authentication succeeded	Always	🗑
1:N authentication failed	Always	🗑
Dual authentication succeeded	Always	🗑
Dual authentication failed	Always	🗑
Authentication failed	Always	🗑
Access denied	Always	🗑
Administrator menu entered	Always	🗑

- As image log required to take a picture, not all of Suprema devices support image log feature. If your device has a camera on it, you can use image log feature as below.

3. Check your image log saved correctly.

- Go to 'Monitoring - Real-time Log'.
- As a below sample configure to save an image log when 1:1 authentication succeeded, do the card authentication process and check the image log on the left below.
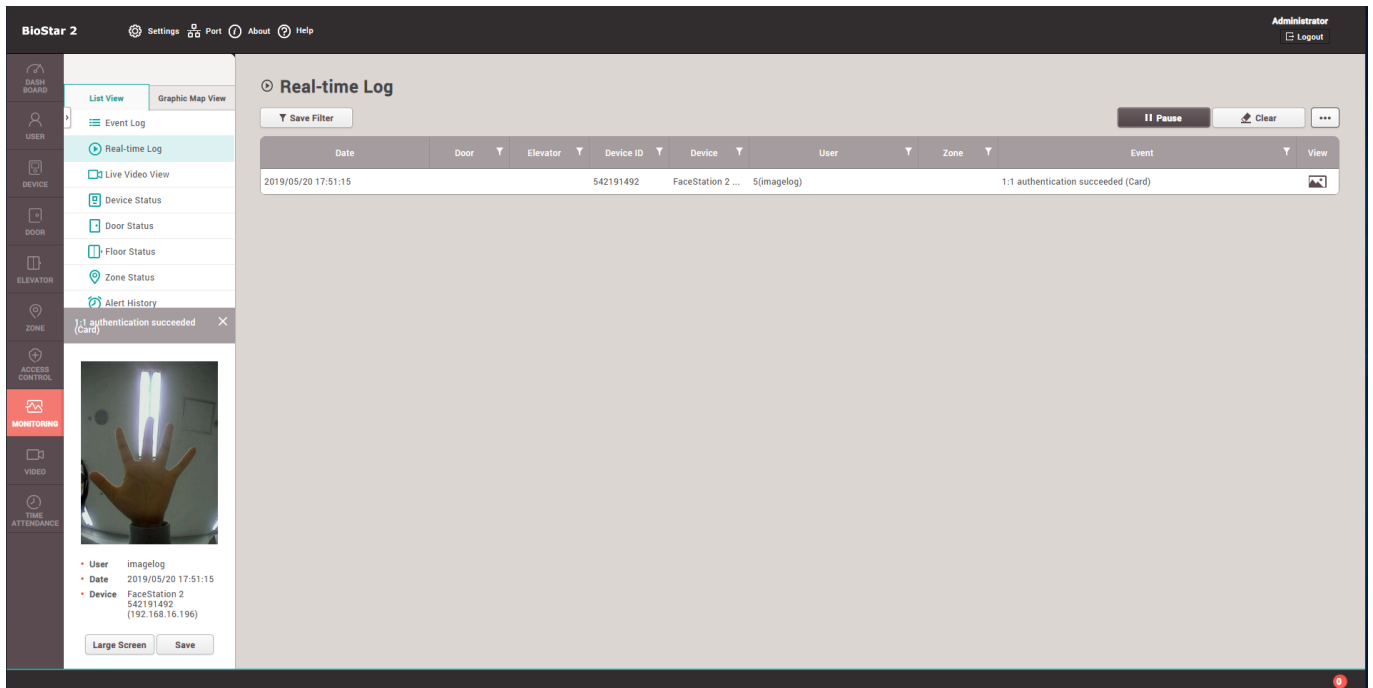

- When the image log is captured, the image automatically saved at the image log file path which you configured 'Settings - Image Log - Storage Path Settings'.
- Following sample is configured as '.\imagelog\'. Image file is saved under the '(device ID) folder'.
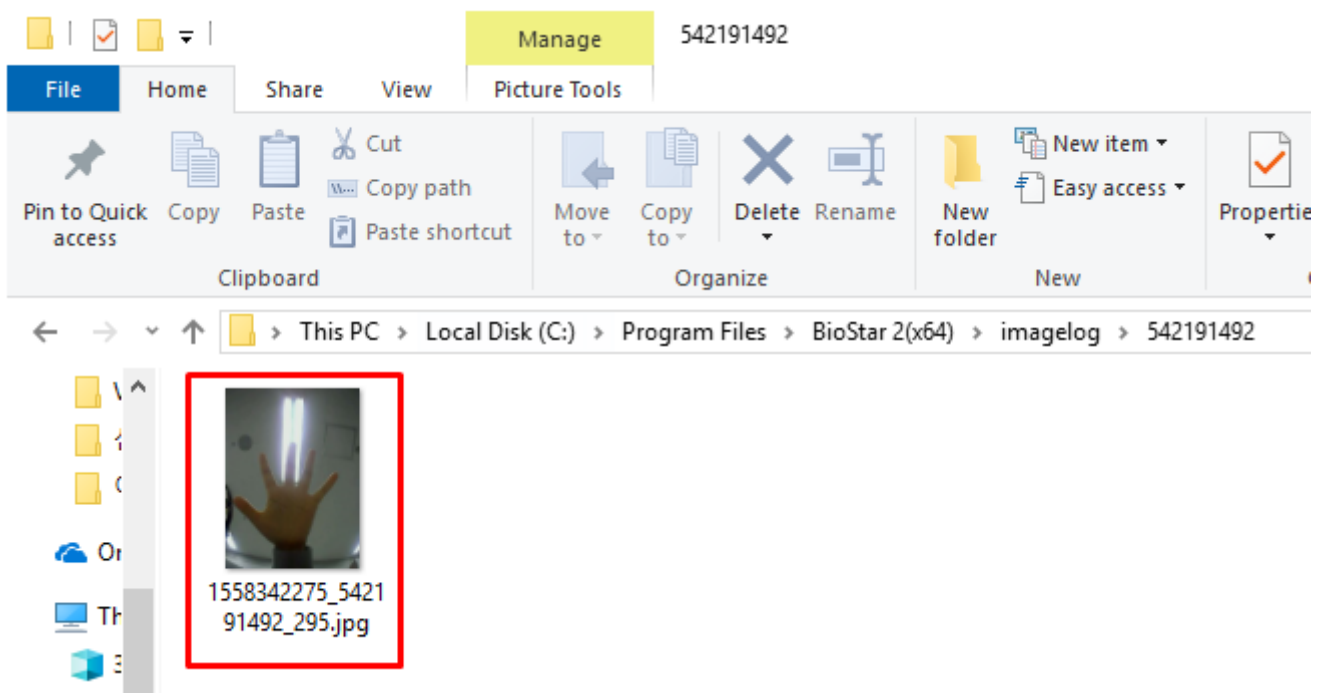

4. Image log auto saving without viewing or checking logs from the monitoring.

- Even though your device is not connected with BioStar 2 server or you were not checking all image logs through the monitoring page, image logs are saved automatically.

- Case 1 : If your device is connected with BioStar 2 but you did not check the image log, the log will be saved at the image log file path which you configured 'Settings - Image Log - Storage Path

Settings'.

- Case 2 : If your device is not connected with BioStar 2, image logs will be stored in the device and will be automatically saved at the image log file path.

1) Your device saved the image log when specific events happened such as 1:1 authentication succeed, 1:N authentication succeed, etc.
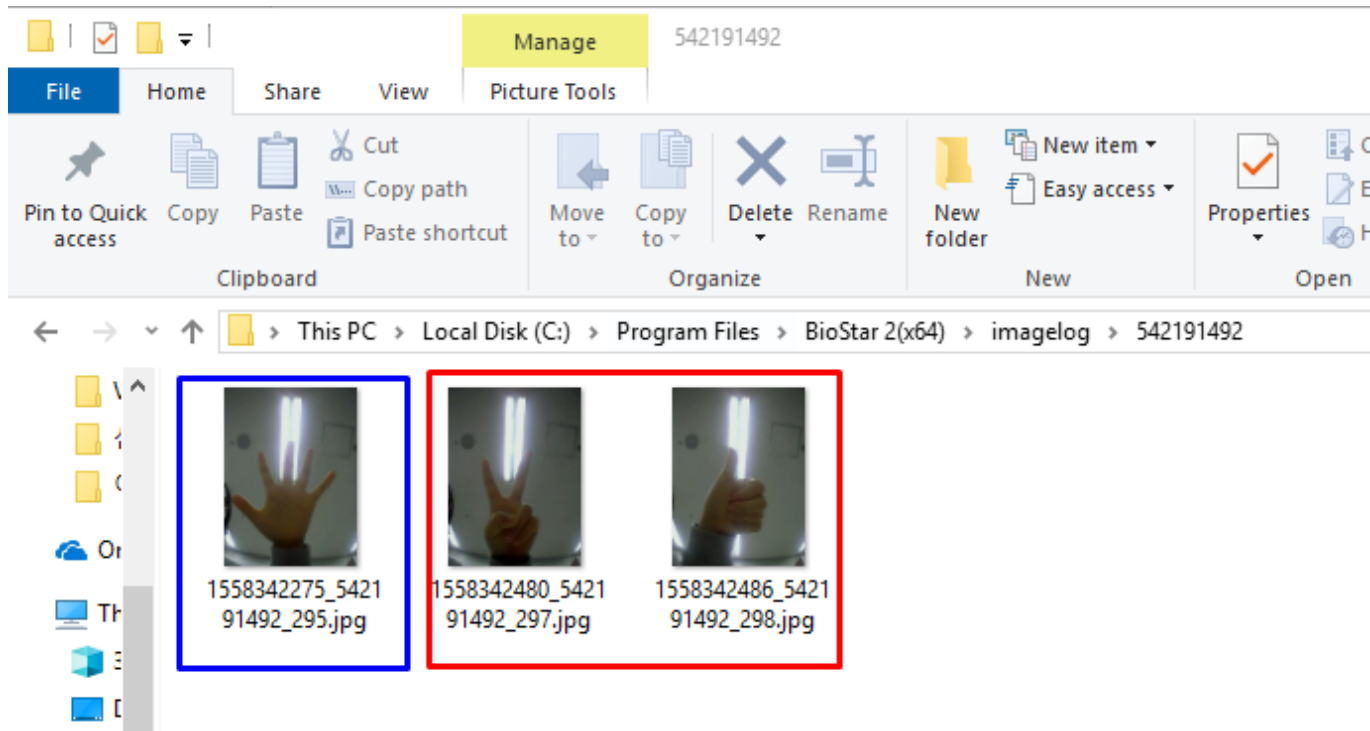

2)   You need to add your device on your device tree.
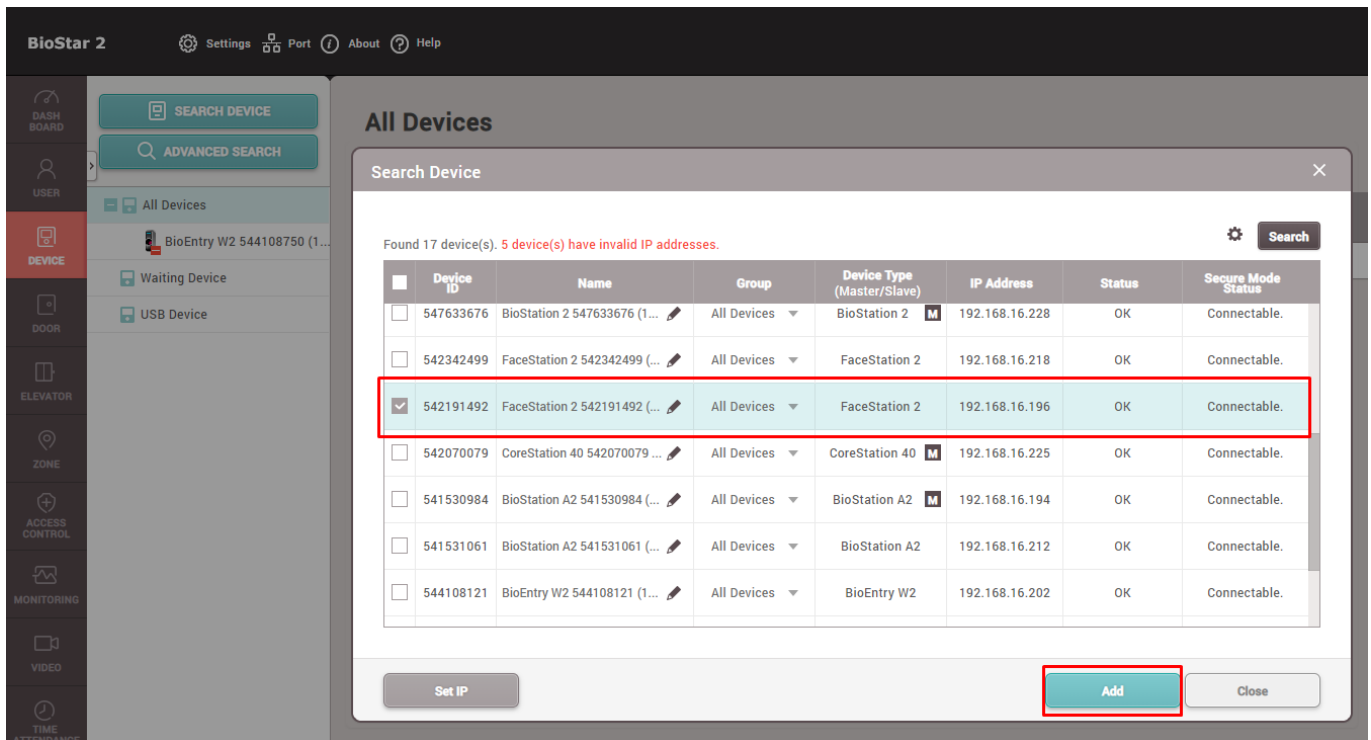

3)   Sync your device with BioStar 2 server. If your device does not get a sync, please do manually as below.
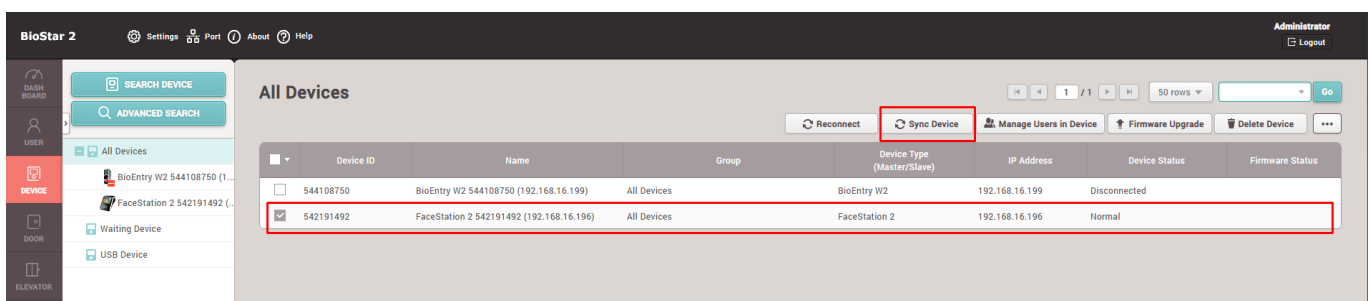

4)   When your device get in sync, you can check the saved image logs as below. (Image log in the blue box is old one, and in the red box is new ones.)

- There is a capability limitation of saving image log by device. You can check the limitation of each device from the User Manual.
