2025/01/06 10:04 1/8 User Management API

# **User Management API**

API that provides functions to enroll and delete users.

- BS2\_GetUserList: Gets the enrolled user ID list.
- BS2 RemoveUser: Deletes user.
- BS2 RemoveAllUser: Deletes all users.
- BS2 GetUserInfos: Gets the user information of the given user ID.
- BS2\_GetUserInfosEx: Gets the user information of the given user ID. ([+ 2.4.0] including Job code and User phrase)
- BS2 EnrolUser: Enrolls new user.
- BS2 EnrolUserEx: Enrolls new user. ([+ 2.4.0] including Job code and User phrase)
- BS2\_EnrolUser: [+ 2.6.3] Enrolls new user.
- BS2\_EnrolUserEx: [+ 2.6.3] Enrolls new user. (including Job code and User phrase)
- BS2 GetUserDatas: Gets selected data of user. (+ [2.5.0])
- BS2 GetUserDatasEx: Gets selected data of user. ([+ 2.5.0] including Job code, User phrase)
- BS2 GetSupportedUserMask: Gets user settings supported by the device.
- BS2 EnrollUserSmall: [+ 2.6.3] Enrolls new user with efficient use of memory.
- BS2\_EnrollUserSmallEx: [+ 2.6.3] Enrolls new user with efficient use of memory.
- BS2\_GetUserSmallInfos: [+ 2.6.3] Gets the user information of the given user ID with efficient use of memory.
- BS2\_GetUserSmallInfosEx: [+ 2.6.3] Gets the user information of the given user ID with efficient use of memory.
- BS2 GetUserSmallDatas: [+ 2.6.3] Gets selected data of user with efficient use of memory.
- BS2 GetUserSmallDatasEx: [+ 2.6.3] Gets selected data of user with efficient use of memory.

# **Structure**

#### **BS2User**

```
typedef struct {
    char userID[BS2_USER_ID_SIZE];
    uint8_t formatVersion;
    uint8_t flag;
    uint16_t version;
    uint8_t numCards;
    uint8_t numFingers;
    uint8_t numFaces;
    uint8_t reserved2[1];
    uint32_t authGroupID;
    uint32_t faceChecksum;
} BS2User;
```

#### 1. userID

User ID provided as string, and has a range of  $1 \sim 4294967295$ .

#### 2. formatVersion

2025/01/06 10:04 2/8 User Management API

Not Used.

# 3. flag

Flag that shows the user's status. OR operation is available and the mask value is listed below.

Value	Description
0x00	None
0x01	User enrolled
0x02	User updated
0x04	User deleted
0x80	User disabled

#### 4. version

Not Used.

#### 5. numCards

Number of cards mapped to user.

# 6. numFingers

Number of fingerprint templates mapped to user.

#### 7. numFaces

Number of face templates mapped to user.

# 8. authGroupID

ID of group when face group matching is enabled.

#### 9. faceChecksum

Not Used.

# **BS2UserSetting**

```
typedef struct {
    uint32_t startTime;
    uint32_t endTime;
    uint8_t fingerAuthMode;
    uint8_t cardAuthMode;
    uint8_t idAuthMode;
    uint8_t securityLevel;
} BS2UserSetting;
```

#### 1. startTime

Start time that a user can identify. When the value is 0, there are no limitations.

#### 2. endTime

End time that that a user can identify. When the value is 0, there are no limitations.

2025/01/06 10:04 3/8 User Management API

# 3. fingerAuthMode

Finger authentication mode for user authentication.

Value	Description
0	Uses only fingerprint authentication
1	Uses fingerprint and PIN authentication
254	Cannot use
255	Undefined(Operates as defined in system)

# 4. cardAuthMode

Card authentication mode for user authentication.

Value	Description
2	Uses only card authentication
3	Uses card and fingerprint authentication
4	Uses card and PIN authentication
5	Uses fingerprint or PIN after card authentication
6	Uses card, fingerprint, and PIN authentication
254	Cannot use
255	Undefined(Operates as defined in system)

# 5. idAuthMode

ID authentication mode for user authentication.

Value	Description
7	Uses fingerprint authentication after entering user ID
8	Uses PIN authentication after entering user ID
9	Uses fingerprint or PIN authentication after entering user ID
10	Uses fingerprint and PIN authentication after entering user ID
254	Cannot use
255	Undefined(Operates as defined in system)

# 6. securityLevel

Security level for fingerprint identification or face recognition.

Value	Description
0	Default value defined in system
1	Lowest security level
2	Low security level
3	Normal security level
4	High security level
5	Highest security level

2025/01/06 10:04 4/8 User Management API

#### **BS2UserPhoto**

```
typedef struct {
    uint32_t size;
    uint8_t data[BS2_USER_PHOT0_SIZE];
} BS2UserPhoto;
```

#### 1. size

Size of the user profile image data.

#### 2. data

Data of the profile image, which can be stored up to 16kb.

# **BS2UserBlob**

```
typedef struct {
    BS2User user;
    BS2UserSetting setting;
    uint8_t name[BS2_USER_NAME_SIZE];
    BS2UserPhoto photo;
    uint8_t pin[BS2_PIN_HASH_SIZE];
    BS2CSNCard* cardObjs;
    BS2Fingerprint* fingerObjs;
    BS2Face* faceObjs;
    uint32_t accessGroupId[BS2_MAX_NUM_OF_ACCESS_GROUP_PER_USER];
} BS2UserBlob;
```

## 1. user

Structure that defines the basic user information.

# 2. setting

Structure that defines the configuration value for user identification.

#### 3. name

User name having UTF-8 for string encoding.

# 4. photo

User profile image, which supports only Jpeg images.

# 5. pin

Personal Identification Number(PIN). It should be entered through BS\_MakePinCode function.

#### 6. cardObjs

Card list for user authentication that needs to exist as much as **user.numCards**. Refer to **Smartcard** API for data format.

In case of Secure Crendential card, cardObjs array of BS2UserBlob structure should be filled and the user should be updated after Secure Crendential card issuing.

# 7. fingerObjs

2025/01/06 10:04 5/8 User Management API

Fingerprint template for user authentication that needs to exist as much as **user.numFingers**. Refer to Fingerprint API for data format.

# 8. faceObjs

Face template for user authentication that needs to exist as much as **user.numFaces**. Refer to Face API for data format.

# 9. accessGroupId

List of access groups where users belong to which can be configured up to 16 groups.

# BS2Job

```
typedef struct {
    uint8_t numJobs;
    uint8_t reserved[3];

struct {
     BS2_JOB_CODE code;
     BS2_JOB_LABEL label;
} jobs[BS2_MAX_JOB_SIZE];
} BS2Job;
```

## 1. numJobs

Number of job codes allocated to the user.

2. reserved

Reserved Space.

3. jobs

List of jobs.

#### **BS2UserBlobEx**

```
typedef struct {
    BS2User user;
    BS2UserSetting setting;
    uint8_t name[BS2_USER_NAME_SIZE];
    BS2UserPhoto photo;
    uint8_t pin[BS2_PIN_HASH_SIZE];
    BS2CSNCard* cardObjs;
    BS2Fingerprint* fingerObjs;
    BS2Face* faceObjs;
    BS2Job job;
    BS2_USER_PHRASE phrase;
    uint32_t accessGroupId[BS2_MAX_NUM_OF_ACCESS_GROUP_PER_USER];
} BS2UserBlobEx;
```

2025/01/06 10:04 6/8 User Management API

#### 1. user

Structure that defines the basic user information.

# 2. setting

Structure that defines the configuration value for user identification.

#### 3. name

User name having UTF-8 for string encoding.

# 4. photo

User profile image, which supports only Jpeg images.

# 5. pin

Personal Identification Number(PIN). It should be entered through BS\_MakePinCode function.

#### 6. cardObjs

Card list for user authentication that needs to exist as much as **user.numCards**. Refer to **Smartcard**API for data format.

#### 7. fingerObjs

Fingerprint template for user authentication that needs to exist as much as **user.numFingers**. Refer to Fingerprint API for data format.

# 8. faceObjs

Face template for user authentication that needs to exist as much as **user.numFaces**. Refer to Face API for data format.

## 9. job

Job code that will be allocated to user.

#### 10. phrase

Private message that will be displayed when the user authenticates. (only in FS2 FW 1.0.0 or higher)

#### 11. accessGroupId

List of access groups where users belong to which can be configured up to 16 groups.

# **BS2UserSmallBlob**

```
typedef struct {
    BS2User user;
    BS2UserSetting setting;
    uint8_t name[BS2_USER_NAME_SIZE];
    BS2UserPhoto* photo;
    uint8_t pin[BS2_PIN_HASH_SIZE];
    BS2CSNCard* cardObjs;
    BS2Fingerprint* fingerObjs;
    BS2Face* faceObjs;
    uint32_t accessGroupId[BS2_MAX_NUM_OF_ACCESS_GROUP_PER_USER];
```

2025/01/06 10:04 7/8 User Management API

# } BS2UserSmallBlob;

#### 1. user

Structure that defines the basic user information.

# 2. setting

Structure that defines the configuration value for user identification.

#### 3. name

User name having UTF-8 for string encoding.

# 4. photo

User profile image, which supports only Jpeg images.

# 5. pin

Personal Identification Number(PIN). It should be entered through BS\_MakePinCode function.

# 6. cardObjs

Card list for user authentication that needs to exist as much as **user.numCards**. Refer to **Smartcard**API for data format.

# 7. fingerObjs

Fingerprint template for user authentication that needs to exist as much as **user.numFingers**. Refer to Fingerprint API for data format.

# 8. faceObjs

Face template for user authentication that needs to exist as much as **user.numFaces**. Refer to Face API for data format.

#### 9. accessGroupId

List of access groups where users belong to which can be configured up to 16 groups.

# **BS2UserSmallBlobEx**

```
typedef struct {
    BS2User user;
    BS2UserSetting setting;
    uint8_t name[BS2_USER_NAME_SIZE];
    BS2UserPhoto* photo;
    uint8_t pin[BS2_PIN_HASH_SIZE];
    BS2CSNCard* cardObjs;
    BS2Fingerprint* fingerObjs;
    BS2Face* faceObjs;
    BS2Job job;
    BS2_USER_PHRASE phrase;
    uint32_t accessGroupId[BS2_MAX_NUM_OF_ACCESS_GROUP_PER_USER];
} BS2UserSmallBlobEx;
```

2025/01/06 10:04 8/8 User Management API

#### 1. user

Structure that defines the basic user information.

# 2. setting

Structure that defines the configuration value for user identification.

#### 3. name

User name having UTF-8 for string encoding.

# 4. photo

User profile image, which supports only Jpeg images.

# 5. pin

Personal Identification Number(PIN). It should be entered through BS\_MakePinCode function.

# 6. cardObjs

Card list for user authentication that needs to exist as much as **user.numCards**. Refer to **Smartcard**API for data format.

#### 7. fingerObjs

Fingerprint template for user authentication that needs to exist as much as **user.numFingers**. Refer to Fingerprint API for data format.

# 8. faceObjs

Face template for user authentication that needs to exist as much as **user.numFaces**. Refer to Face API for data format.

## 9. job

Job code that will be allocated to user.

#### 10. phrase

Private message that will be displayed when the user authenticates. (only in FS2 FW 1.0.0 or higher)

# 11. accessGroupId

List of access groups where users belong to which can be configured up to 16 groups.
