## BS2\_GetSocketSSLRetryCount

[+ 2.9.1] During SSL socket communication, if an error occurs while reading and writing packets from the socket in the communication section, the SDK automatically retries a certain number of times. This API gets the set value for the number of retries set in the SDK.

### Declaration

```
#include "BS_API.h"

int BS2_GetSocketSSLRetryCount(void* context, uint32_t* count);
```

### Parameter

- [In] *context* : Context
- [Out] *count* : Retry count setting value pointer

### Return Value

If successfully done, BS\_SDK\_SUCCESS will be returned. If there is an error, the corresponding error code will be returned.
