목차

BS2_GetImageLog

[+ 2.5.0] 이벤트로그 식별자를 이용하여 이미지로그를 가져옵니다.

함수

```
#include "BS_API.h"

int BS2_GetImageLog(void* context, uint32_t deviceId, uint32_t eventId,
uint8_t** imageObj, uint32_t* imageSize);
```

파라미터

- [In] *context* : Context
- [In] *deviceId* : 장치 식별자
- [In] *eventId* : 이벤트로그 식별자
- [Out] *imageObj* : 이미지로그를 저장할 포인터
- [Out] *imageSize* : 이미지로그의 크기

> **참고**
> imageObj 변수는 사용 후 BS2_ReleaseObject 함수를 통해 시스템에 메모리를 반환해야 합니다.

반환값

성공적으로 수행될 경우 BS_SDK_SUCCESS를 반환하고, 에러가 발생할 경우 상응하는 에러 코드를 반환합니다. C++

```
int getImageLog(void* context, BS2_DEVICE_ID id, BS2_EVENT_ID eventID,
uint8_t* imageBuf, uint32_t& imageSize)
{
    if (!imageBuf)
        return BS_SDK_ERROR_NULL_POINTER;

    uint8_t* imageObj = NULL;
    uint32_t size();
    int sdkResult = BS2_GetImageLog(context, id, eventID, &imageObj, &size);
    if (BS_SDK_SUCCESS == sdkResult)
    {
        memcpy(imageBuf, imageObj, size);
```

```
        imageSize = size;
        if (imageObj)
            BS2_ReleaseObject(imageObj);
    }

    return sdkResult;
}
```

C#

```
void getImageLog(IntPtr sdkContext, UInt32 deviceID, bool isMasterDevice)
{
    BS2SimpleDeviceInfo deviceInfo;
    int structSize = Marshal.SizeOf(typeof(BS2Event));
    UInt16 imageLogEventCode =
