Configuration API > [BS2\\_SetCustomCardConfig](#)

## BS2\_SetCustomCardConfig

[+ 2.9.4] Stores Custom smart card settings.

### Warning

To use the custom smart card function, you must disable suprema smart card modes and enable custom smart card modes in useCardOperationMask of [BS2SystemConfig](#).

## Declaration

```
#include "BS_API.h"

int BS2_SetCustomCardConfig(void* context, uint32_t deviceId, const
BS2CustomCardConfig* config);
```

[See to structure BS2CustomCardConfig](#)

## Parameter

- [In] *context* : Context
- [In] *deviceId* : Device Identifier
- [Out] *config* : Pointer to set Custom smart card information

## Return Value

If successfully done, BS\_SDK\_SUCCESS will be returned. If there is an error, the corresponding error code will be returned.

## See Also
