How to Configure Xpass D2

Xpass D2 is a new device introduced with BioStar 2.6. It is a dummy reader for reading cards, which means it doesn't perform data matching on the device. The device can be used as slave device, or a Wiegand reader to send Wiegand output. The device sends out a Wiegand signal with the default 26bit format and the Wiegand configuration will be done with a separate tool (to be released in May of 2018).

Adding as a Slave Device

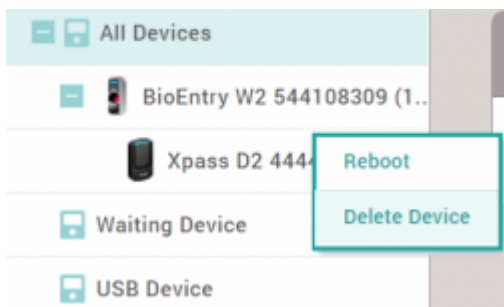

You will need a master device to add the slave D2 device. Refer to the article below to learn how to search a slave device. [RS485 Mode \(Master, Default, Slave\)](#)

Using the device as a Wiegand Reader

If you have already used the device as a slave device before, you must reset the device to use it as a Wiegand reader (sending Wiegand output).

1. Delete the device from BioStar 2 client as a slave device.

2. Detach the metal bracket from the device. 3. Press the reset button.

4. Use the device as a Wiegand reader by adding it as a **Wiegand Device** on a master device.

You cannot use the device as a slave device and use Wiegand output at the same time.
