BioStar 2 user ID can be mapped to several different fields in Active Directory 1

BioStar 2 user ID can be mapped to several different fields in Active Directory

When user name of AD is set as a fixed value for the User ID it causes difficulties for users to integrate with another third-party system. Up to BioStar 2.7.8, the User ID could not be changed to another field.

From BioStar 2.7.10, User ID field can be changed/set to map to other values.

The screenshot displays the 'Field Configuration' window in BioStar 2. It is divided into two main sections: 'User Field Mapping' and 'Synchronize'. In the 'User Field Mapping' section, there is a table with two columns: 'BioStar2 User Field' and 'AD Server Field'. The 'BioStar2 User Field' column contains 'User ID'. The 'AD Server Field' column contains a list of available fields: 'wellKnownObjects', 'userParameters', 'userPassword', 'userPrincipalName', 'userSMIMECertificate', 'userSharedFolder', 'userSharedFolderOther', 'userWorkstations', and 'wWWHomePage'. The 'wellKnownObjects' field is currently selected. Below the table, there is a 'Synchronize' section with a 'Status' label and a 'Sync Now' button.

BioStar2 User Field	AD Server Field
User ID	wellKnownObjects
	userParameters
	userPassword
	userPrincipalName
	userSMIMECertificate
	userSharedFolder
	userSharedFolderOther
	userWorkstations
	wWWHomePage
