# How to delete personal information when issuing Access on card

One of the main reasons for using AoC(Access on Card) is to leave no personal information on the server. It was very inconvenient to manually delete personal information on the DB in order to perform major projects.

From BioStar 2.6.0, the option has been added, which automatically deletes personal information when issuing AoC to eliminate this inconvenience. Personal information to delete is : PIN, fingerprint, face, email, phone, birthday, gender (birthday, gender are data only in DB)

The screenshot shows the 'Server' configuration page in BioStar 2. The 'General' tab is active, displaying settings for BioStar IP Address, Port, Session Timeout, Password Level, Log Upload, and Web Server Protocol. Below this is the 'User/Device Management' section, which includes options for Automatic User Synchronization, Fingerprint Template Format, Enrollment Device, Mobile Card Enrollment, and User ID Type. At the bottom of the 'User/Device Management' section, the option 'Delete personal & credential data when issuing an AoC' is highlighted with a red box and is set to 'Active'. Below this option is a toggle for 'AC event log storage duration' set to 'Inactive' with a value of '60' days.

## Setting>Server>Delete personal & credential data when issuing an AoC

When you turn on the option above, all personal information will be deleted automatically when issuing Access on Card.
