How to use Swagger UI and Postman for BioStar 2 New Local API

Swagger UI

It is a tool which helps test and document ***REST API** easily.

[Request methods for REST API]

Type	Explanation
GET	The GET method requests a representation of the specified resource. Requests using GET should only retrieve data.
POST	The POST method is used to submit an entity to the specified resource.
PUT	The PUT method replaces all current representations of the target resource with the request payload.
DELETE	The DELETE method deletes the specified resource.

We recommend that you should use the New Local API. When you send the message to BioStar 2 via API, you have to use the URL format below:

[https://\[Your BioStar 2 Server IP\]:\[BioStar 2 port\]/swagger/index.html](https://[Your BioStar 2 Server IP]:[BioStar 2 port]/swagger/index.html)

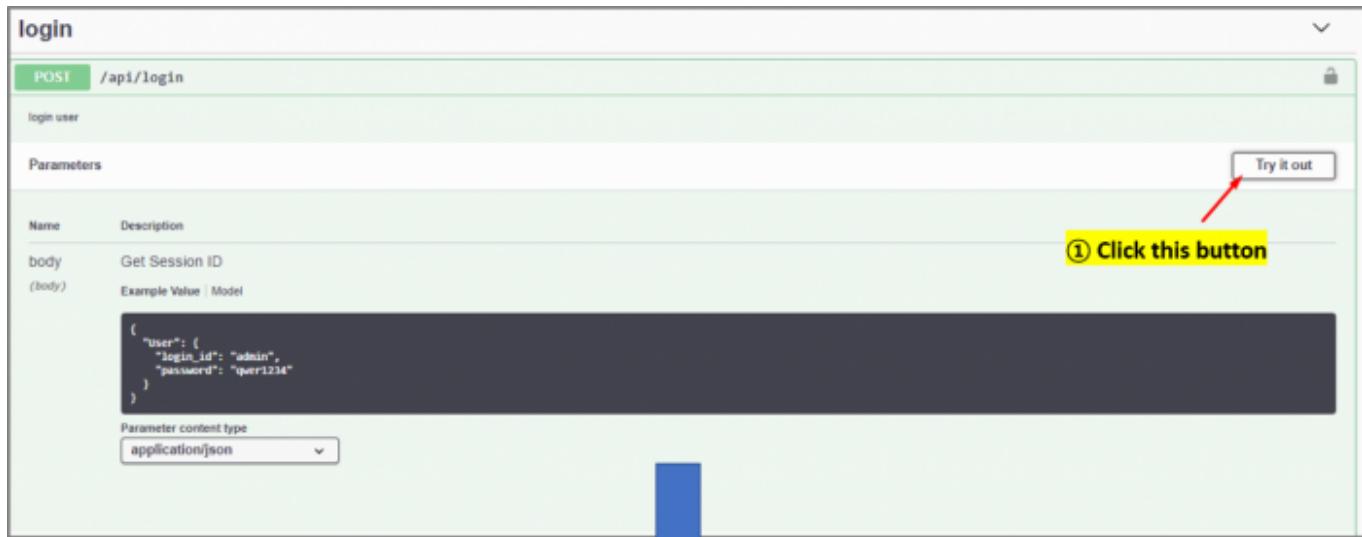

The screenshot shows the BioStar 2 API documentation page. At the top, there's a header with 'BioStar 2 API' and a version '2.7.14'. Below the header, a note says 'HTTP Header 'Content-Language' is used for language. ISO-639-1, ISO-639-3 values are supported.' There are dropdown menus for 'Schemes' (set to 'HTTPS') and an 'Authorize' button with a lock icon. A search bar labeled 'Filter by tag' is present. The main content area is divided into sections: 'login' and 'access_groups'. The 'login' section contains a single green 'POST /api/login' button. The 'access_groups' section contains several methods: a red 'DELETE /api/access_groups' button, a blue 'GET /api/access_groups/{id}' button, an orange 'PUT /api/access_groups/{id}' button, a blue 'GET /api/access_groups/{id}/users' button, and a green 'POST /api/v2/access_groups/search' button.

We provide the information on BioStar 2 API through the Swagger UI so that you can check kinds of APIs and those model schemas before calling API. Below is an example for the way to utilize this tool by using login API.

How to utilize Swagger UI
