## What is Centralized System with DM-20?

### BioStar 2 for Centralized Access Control System

Even though BioStar 2 adopts the distributed access control system, it can be configured to support the centralized access control system by using its master and slave functionalities along with DM-20. DM-20 supports two Wiegand reader interfaces including Power, LED, and Buzzer control. As a result, it's possible to configure one master device with multiple number of Wiegand readers while maintaining an existing two or four door legacy type cabling, as below.

#### Controlling 4 Doors

Components: Master Device x 1, DM-20 x 1, Wiegand Reader x 2, Suprema Device(Slave) x 2
